

CopyAssistant – Copy and Replace Assistant

Your requirements

- You need a tool to copy or rename easily and under consideration of external references, family tables and drawings Pro/E structures.
- You will copy or rename complete structures or only selected top elements and their depending components.
- You will start the application out of the CAD Desktop environment.

Our solution

For an optimal support to copy and rename Pro/E structures, .riess engineering has developed the Java-based copy and replace assistant (CopyAssistant). This tool has the following features:

- Selection of complete structures, which can be enhanced with external references, family parts and the available drawings
- The selected objects can be copied or renamed
- To define the new file names, wildcards can be used
- Standard parts can be protected, so that they will not be copied or renamed

Project steps

- The CopyAssistant will be installed and trained by our consultants
- Together with our consultants customer specific enhancements can be specified
