

ProeDataImport and FileDataImport – Import tools

Your requirements

- You are switching from a PDM- or CAD-based document management system to mySAP PLM and you have the need to migrate your data.
- A large amount of Pro/ENGINEER data and single files from other applications has to be imported fast and smoothly to mySAP PLM.

Our solution

For the import of Pro/ENGINEER objects and structures or for single files into mySAP PLM the .riess engineering solutions ProeDataImport and FileDataImport are used. The different features are:

- The import is based on input lists or import directories
- Creating of the document info records
- Saving the files on a content server
- Protocols to control the import process

ProeDataImport has additional features:

- Transferring data coming out of Pro/ENGINEER parameters
- Synchronization of parameters between Pro/E and SAP
- Creating document structures within SAP
- Marking of suppressed components within the document structures
- Setting the standard part flag for the import of standard components
- Setting the correct status

Project steps

- The import tools will be installed and configured and adopted to the customer need, if necessary.
- The customer can do the import by his own or together with our consultants.
