

JsConverter – Basic module for the conversion server

- Your requirements
- Conversion/updating/revision of files within SAP in batch mode
 - Automatic creation/update of neutral formats attached to a DIR
 - Integration within an existing SAP conversion server process
 - Easy to use and easily expandable
 - Highly flexible / stable / portable

Our solution

The JsConverter can be integrated within the standard SAP conversion server process and offers the following features:

- Can be started manually or automatically out of SAP
- Conversion can be triggered by status and document type
- Different conversion services can be used
- Locked documents can be opened / modified and stored back

JavaScript is used for the configuration. It is enhanced with special commands to control Pro/ENGINEER and SAP.

More advantages

- The logging can be configured to console/file/socket
- Configuration is fully portable (customizing is less error prone)
- SAP and Pro/ENGINEER functions are integrated
- Any external commands can be used in a synchronous mode
- Easy syntax for the configuration
- Using JavaScript any customer specific conversion processes can be realized.

Project steps

- Together with the customer our consultants define which files should be converted and which formats should be used for the conversion. Also the conversion rules has to be defined.
- The JsConverter will be implemented within the standard SAP conversion server process.
